TENTS DETAIL

1 TROPIKO
Je z lehkého polyesteru s vysokou odolností proti stárnutí vlivem UV záření. Několikavrstvý zátěr polyuretanu udrží vodní sloupec až 4 000 mm*. Švy a poutka jsou přelepeny speciální páskou.
*4000 mm * **Extreme**, **Adventure**, **Trekking series***
*3000 mm * **Outdoor**, **Family** a **Shelters serie***

2 SILIKONIZACE *
V současnosti nejdokonalejší stupeň ochrany proti pronikání vlhkosti, který byl doposud výsadou jen nejvyšších tříd stanů. Na vnějším plášti stanu je nanesením silikonové úpravy dosaženo vysoce účinného a časově neomezeného vodoodpudivého efektu. Kombinace silikonu, klasického polyuretanového zátěru a přelepených švů a poutek pak znamená definitivní a trvalou ochranu vnějšího stanu proti pronikání vlhkosti.
** **Extreme series***

3 PODLÁŽKA
Je upravena speciálním polyuretanovým zátěrem na nylonové tkanině, který unese ještě vyšší vodní sloupec 10 000 mm, při zachování velice nízké hmotnosti materiálu. Přelepené švy. * U stanů ze série Outdoor, Family a Shelter je podlážka vyrobená z vrstveného polyetylenu, který má vetkanou síťovou (rip-stop) strukturu pro zvýšení pevnosti a odolnosti.
** **Extreme**, **Adventure** a **Trekking series***

4 VNITŘNÍ STAN
Vnitřní stan je vyrobený z lehkého polyesteru s vysokou prodyšností a rip-stop úpravou. V kombinaci s jemnou PES síťkou, která dobře větrá a zabraňuje pronikání nečistot i dotěrného hmyzu do vnitřního stanu.

5 KONSTRUKCE
Precizní provedení a povrchová úprava jsou zárukou trvanlivosti a minimálního opotřebování. Barevně odlišené koncovky tyček a lemování tunýlku stejnou barvou.

DAC FEATHERLITE NSL POLES *
Duralové tyčky využívající systém DAC (Dongah Aluminum Corporation) jsou právem považovány za jednu z nejlepších technologií na světě na poli stanových tyček. Jedná se o technologii, která je založená na vzájemném propojení tyček. Zúžený konec jedné tyčky s menším průměrem umožňuje její vložení do rozšířeného konce další tyčky. Větší průměr tyček s tenčí stěnou zvyšuje celkovou odolnost a výrazně snižuje celkovou hmotnost jedné tyčky o 12 – 18 % v závislosti na její délce. Rozšířený průměr tyček v kombinaci se zvětšeným zásuvným místem na další tyčku vytváří navíc velmi silný spojovací bod mezi jednotlivými částmi tyček. Celková konstrukce stanu se tak stává vysoce odolná proti vnějším vlivům, přičemž si ale stále drží obrovskou výhodu nízké hmotnosti.
** **Extreme series***

DURAL 7001-t6 *
Speciální duralová slitina, která slouží při výrobě tyček. Precizní provedení a povrchová úprava jsou zárukou tuhosti, pevnosti a minimalizují riziko defektu.
** **Extreme series**, **Adventure serie***

DURAWRAP*
Polyesterová fólie aplikovaná na laminátových tyčkách, která výrazně zvyšuje pevnost a pružnost a zároveň prodlužuje jejich životnost (zamezuje třepení konců tyček při jejich zlomení).
** **Trekking series**, **Outdoor**, **Family** a **Shelters serie***

OCELOVÁ KONSTRUKCE *
Ocelové tyčky z kvalitních materiálů opatřené ochrannou vrstvou proti korozi. Díky tvarování se stavba stanu velmi urychlí.
** **Family** a **Shelters serie** / jenom u některých modelů*

6 KOTVENÍ
Je založeno na zásadě, že upevnit spodní okraj tropika pouze kolíky k zemi je nedostačující. Tropiko je proto kotveno též k prutové konstrukci. Jsou zde použity kvalitní zacvakávací spony ITW Nexus, které nejen urychlí stavbu stanu, ale především umožní regulaci napětí látky tropika.
- ***Extreme series** / DAC duralové kolíky/ eloxed gold color*
- ***Adventure serie** / DAC duralové kolíky/ eloxed bordo color*
- ***Trekking series** / duralové kolíky*
- ***Outdoor**, **Family** a **Shelters serie** / ocelové kolíky*

7 VENTILACE
Má nejlepší účinnost, je-li umístěna ve vrcholu kopule. Originální řešení větrání umožňuje plochu větracího otvoru regulovat zevnitř stanu, popřípadě jej i větru vzdorně uzavřít.

8 ODKLÁDACÍ SÍŤKA
Je zavěšena pod vrcholem stanu a je určena pro uložení drobných předmětů.

9 VCHODY
jsou na tropiku i vnitřním stanu řešeny tak, že lze vždy otevřít pravou i levou stranu vchodu, popřípadě obě současně a dosáhnout tak maximálního větrání. Obousměrné zipy tropika jsou překryty na ochranu proti vodě, prachu či zamrzání.

10 SET NA OPRAVU STANU
Všechny stany TRIMM jsou vybaveny samolepicí záplatou na opravu stanu.

Veškeré vlastnosti a rozměry produktů, včetně hmotnosti stanů a velikosti tyček mohou být ve skutečnosti poněkud odlišné od údajů uvedených v katalogu, jiných tištěných materiálech či na webu. Tyto rozdíly jsou způsobeny možnými drobnými změnami v designu, výrobním procesu a/nebo přirozenou odchylkou ve vlastnostech použitých materiálů. Také barvy produktů mají své přirozené odchylky a mohou se tedy lehce lišit od barev vyobrazených na webu či v tištěných materiálech.

TENTS CATEGORIES

EXTREME SERIE

CZ

Stany řady EXTREME jsou určeny pro použití v nejobtížnějších expedičních a vysokohorských podmínkách. Díky použitým špičkovým materiálům a technologiím předních světových výrobců jsou stany této řady na úrovni renomovaných značek, které v některých parametrech dokonce předčí. Maximální pozornost je věnována celkové hmotnosti stanů, kvalitě komponentů a odolnosti vůči extrémním klimatickým podmínkám. Stany této řady jsou testované během mnoha vysokohorských expedic a výstupů na nejvyšší vrcholy světa.

EN

The EXTREME tent series is designed for use in the toughest of expedition and alpine conditions. Thanks to the use of cutting-edge materials and technologies offered by the world's leading manufacturers this series competes with tents made by renowned manufacturers and even outperforms them in certain parameters. Maximum attention is paid to the overall weight of the tent, the quality of components and its resistance to extreme climatic conditions. Tents included in this series have been tested by many mountain climbing adventurers and expeditions on the highest peaks in the world.

ADVENTURE SERIE

CZ

Stany řady ADVENTURE jsou vhodné pro celoroční použití a jsou určené dobrodruhům, kteří nemusí řešit, zda je stan vhodný do sněhu v Alpách nebo do písku na pláži. Odolná duralová konstrukce a parametry použitých materiálů předurčují tuhle řadu pro využití ve veškerých klimatických podmínkách. Tyto stany spolehlivě odolají přívalu deště i silnému větru. Nízkou hmotností a příznivou cenou osloví širokou škálu náročných uživatelů.

EN

The ADVENTURE tent series is suitable for year-round use and is designed for adventurers who need not address whether the tent is suitable for snow in the Alps or for sand on the beach. The strong duralumin construction and parameters of used materials make this series ideal for use in all weather conditions. These tents reliably withstand heavy rain and strong wind. The low weight and affordable price will certainly appeal to a wide range of demanding users.

TREKKING SERIE

CZ

Turistické stany řady TREKKING jsou vhodné pro široké využití a celoroční použití. Určené turistům, kteří preferují kvalitu za rozumnou cenu. Kvalitní durawrapová konstrukce zaručuje dostatečnou tuhost. Parametry použitých materiálů jsou stejné jako u ADVENTURE SERIE, což předurčuje tuhle řadu pro využití v různých klimatických podmínkách. Tyto stany také spolehlivě odolají dešti i silnému větru.

EN

The TREKKING tent series is suitable for general and year-round use. Designated for tourists who prefer quality at a reasonable price. The high-quality durawrap construction ensures sufficient rigidity. The material parameters are the same as in the ADVENTURE SERIES, which predisposes this series for use in various weather conditions. These tents also reliably withstand rain and strong wind.

OUTDOOR SERIE

CZ

Nejrozšířenější a nejprodávanější série stanů TRIMM. Snadno postavitelné a maximálně spolehlivé stany na výlety do přírody a kempu. Podlážky z vysoce nepropustného vrstveného polyetylenu odolávají i dlouhodobému působení vlhkosti, deště i mechanických nerovností.

EN

The most common and best-selling series of TRIMM tents. Easily constructible and highly reliable tents on field and camping trips. The floor layer (groundsheet) is made of highly impermeable multilayer polyethylene that resists prolonged exposure to moisture, rain and evens out terrain inequalities.

FAMILY SERIE

CZ

Rodinná dovolená ve stanu nabízí spoustu zážitků pro vás i vaše děti, avšak pouze za předpokladu, že máte pocit domova. Proto je tato série stanů TRIMM vyvinutá a zaměřená na pohodlí a komfort i při delším pobytu na jednom místě. Maximální prostor a stabilitu stanů zajišťuje robustní laminátová nebo ocelová konstrukce a důmyslný systém kotvení. Součástí dodávky stanů jsou přídavné podlážky, které mohou být integrovány pod stanem po celé jeho ploše. Jsou vyrobeny z vysoce nepropustného vrstveného polyetylenu, díky kterému odolávají i dlouhodobému působení vlhkosti, deště i mechanických nerovností a umožnují udržovat stan uklizený i při delším pobytu na jednom místě.

EN

A family vacation in a tent offers many adventures for you and your children, but only provided that you feel as comfortable as home. Therefore, this series of TRIMM tents was developed with the intention to provide high comfort even during extended stays in one place. The maximum space and tent stability is ensured by the robust fibreglass and steel structure and a unique anchoring system. The tent includes additional groundsheets, which may be integrated across the entire tent floor. They are made from highly impermeable multilayer polyethylene, which makes it resistant to prolonged exposure to moisture, rain, terrain inequalities and allows you to maintain a tidy tent during long stays in one place.

SHELTERS SERIE

CZ

Tato řada vyniká jednoduchým provedením a je konstrukčně určená k!použití jako přístřešky před nepřízní počasí, a to zejména proti slunci a větru. Ideální využití při rodinných dovolených, společenských akcích, na pláži či rybaření. Nouzově možno využít i k!přespání.

EN

This series excels thanks to the simple design. The structure of these tents was designed to be used as a shelter from the elements, especially against strong sun and wind. Ideal for family holidays, social events, at the beach or for fishing. May also be used for sleeping, but only in emergency situations.

SHELTERS SERIE

PARTY S WALL REGULAR

SIDE WALL

0.5 kg

MATERIAL
100 % PES, 2 000 mm H_2O

A side wall for the PARTY-S tent that easily closes the tent and provides protection from bad weather.

FEATURES

- Side wall for PARTY S shelters the space from sun, wind and rain

1

Dark Lagoon

SHELTERS SERIE

PARTY S WALL WINDOW

SIDE WALL

0.7 kg

MATERIAL
100 % PES, 2 000 mm H_2O

A side wall with a zip and windows for the PARTY S shelter. The zip allows passage, the windows let in light.

1

Dark Lagoon

SHELTERS SERIE

PARTY S WALL ZIPPER

SIDE WALL

0.6 kg

MATERIAL
100 % PES, 2 000 mm H_2O

A side wall with a zip for the PARTY S shelter. The zip allows easy passage and the wall provides shade and shelter from the wind.

1

Dark Lagoon

TENTS ACCESSORIES

FOOTPRINT PACK

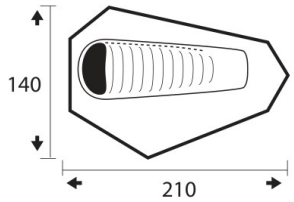
FOOTPRINT

400 g **210 × 140 cm** **25 × 32 cm**

MATERIAL
100 % PES Oxford , 10 000 mm H_2O

DIMENSIONS
210 x 140 cm

An external footprint for the Trimm PACK tent that gives better protection from damp and cold, in the vestibule too. Its main purpose is to protect the tent floor from punctures and tears. Thanks to its mechanical resistance it significantly extends the life of the floor, especially in demanding conditions and on uneven ground.



1

Dark Grey

TENTS ACCESSORIES

TENTS POLES GUM

SPARE PART

20 g 3 ks

MATERIAL
100 % PES + 100 % rubber

DIMENSIONS
10 m x 3 mm

TENTS POLES GUM – 10 m from the Trimm repair set range, for repairing or replacing the shock cord in tent poles. The set contains the elastic cord and a wire for threading it.

1

White Dots

TENTS ACCESSORIES

Y-PEG - D23

PEG

18 g 12 × 230 mm 4 ks

Shape

MATERIAL
Anodized hardened aluminium

PEGS
Anodized hardened aluminium

DIMENSIONS
12 x 230 mm

An anodised aluminium tent peg weighing 18 g, 23 cm long. The triangular profile gives better holding and, thanks to its strength, works in harder ground too. The top of the peg has a notch and a cord loop for easier pulling out of the ground and for fixing the guy line.

1

Bordo Anodized

TENTS ACCESSORIES

MATERIAL
Anodized hardened aluminium

PEGS
Anodized hardened aluminium

DIMENSIONS
12 x 180 mm

An anodised aluminium tent peg weighing 16 g, 18 cm long. The triangular profile gives better holding and, thanks to its strength, works in harder ground too. The top of the peg has a notch and a cord loop for easier pulling out of the ground and for fixing the guy line.

1

Bordo Anodized

TENTS ACCESSORIES

V-PEG - D17

PEG

12 g 9 × 9 × 175 mm 4 ks

Shape

MATERIAL
Anodized hardened aluminium

PEGS
Anodized hardened aluminium

DIMENSIONS
9 x 9 x 175 mm

An ultralight V-shaped anodised aluminium tent peg weighing 12 g, 17 cm long. It offers a very good ratio of holding power and durability. Its shape makes it suitable for universal use. The top of the peg has a notch for easier pulling out of the ground and for fixing the guy line.

1

Bordo Anodized

TENTS ACCESSORIES

ROCK-PEG - D16

PEG

11 g 5 × 5 × 160 mm 4 ks

Shape

MATERIAL
Anodized hardened aluminium

PEGS
Anodized hardened aluminium

DIMENSIONS
5 x 5 x 160 mm

A light square-profile anodised aluminium tent peg weighing 11 g, 16 cm long. Its shape makes it suitable for very hard, rocky ground.

1

Bordo Anodized

TENTS ACCESSORIES

SOLID-PEG - D18

PEG

13 g 7 × 180 mm 4 ks

Shape

MATERIAL
Anodized hardened aluminium

PEGS
Anodized hardened aluminium

DIMENSIONS
7 x 180 mm

A light aluminium peg, 7 mm in diameter, weighing 13 g, 18 cm long. Its shape makes it suitable for universal use.

Black

SLEEPING BAGS DETAIL

HOLLOWFIBRE 1, 4, 6

CZ

Hollowfibre 1, 4 a 6 jsou spirálově stočená polyesterová dutá vlákna, která mají 1, 4 (popř. 6) kanálků. Vzduch zadržovaný v těchto kanálcích způsobuje jejich vynikající izolační schopnosti. Díky pružné vazbě a specifickému ukládání do vrstev dosahují vlákna tzv. LOFT. To znamená, že po vybalení z obalu rychle zaujmou původní objem a vyplní prostor komor spacího pytle. Maximálního účinku a životnosti je dosaženo nanesením vrstvičky silikonu na povrch vláken, jenž zafixuje vzájemnou polohu vláken a sníží vzájemné tření. Dutá vlákna výborně izolují i při vysoké vzdušné vlhkosti, jsou nenasákavá, rychle vysychají, jsou nealergická. Snadno se udržují, lze je klasicky prát a sušit.

EN

Hollowfibre 1, 4 and 6 are coiled polyester filaments containing 1, 4 or 6 channels inside. The air detained in these channels gives them excellent insulating properties. Owing to their resilient binding and specific layering, the filaments show higher lofting which means that after unpacking they take up their original volume and fill up the space of the sleeping bag chambers. A thin layer of silicone that has been put on the filaments fixes their mutual positions and decreases friction between them. The hollow fibres offer excellent insulation even at high air humidity, have no absorbing capacity, become dry quickly and are hypoallergic. They are easy to maintain and can be normally washed and dried.

THERMOLITE EXTRA

CZ

Thermolite Extra je výplň konstruovaná pro použití v nízkých teplotách při zachování minimální hmotnosti.

Thermolite Extra poskytuje:

- Zvýšenou měkkost
- Větší tepelnou ochranu než peří, i když je vlákno navlhlé
- Mimořádnou trvanlivost po opakovaném praní
- Může se prát v pračce i sušit v sušičce
- Je nealergenní

Thermolite Extra poskytuje až o 30 % více tepla než běžné náplně při zachování stejné hmotnosti./

EN

Thermolite Extra is the insulation engineered for low temperatures while maintaining the minimum weight.

Thermolite Extra provides:

- More softness
- Better warmth protection than down even when the fibres are wet
- Exceptional durability with repeated washing
- It is machine washable and dryable
- It is nonallergenic

Thermolite Extra provides up to 30% more warmth than common types of insulation while maintaining the same carry weight.

PEŘÍ/DOWN

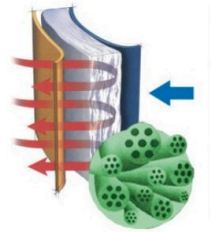
CZ

Náplň péřových spacích pytlů je tvořena husím prachovým peřím a větších měkkých pírek. Prachové peří má klíčové izolační a tepelné vlastnosti. Poměr mezi měkkými pírky a husím prachem je vyjádřen v procentech a slouží k identifikaci a porovnání spacích pytlů. Např. údaj 95/5 znamená 95% prachového peří a 5% měkkých pírek. Další důležitou hodnotou je tzn. LOFT, který je měřený prostřednictvím „plnící síly" (FP – Fill Power) a udávaný v jednotkách CUIN (kubický palec). Vyjadřuje schopnost peří zaujmout, vyplnit určitý prostor při určité hmotnosti a určitém stlačení. Vyšší hodnota znamená vyšší stupeň tepelné izolace. Např. Husí prachové peří 95/5 800 CUIN.

EN

The down sleeping bag filling is composed of goose down and feathers. Down provides maximum insulation and warmth. The down/feather ratio is expressed in percentage and is used for clear identification and comparison of different sleeping bags. E.g. 95/5 means 95% of down and 5% of feathers. Fill power is the key to determining the quality of the down fill and level of warmth. The higher the FP, the larger the down cluster, thus, the higher the resilience, strength, insulation, and overall quality of the down. It is the volume measured in cubic inches (CUIN), indicates the amount of void that an ounce of down will expand to fill. The LOFT is usually measured in terms of FP. E.g. Goose down 95/5 800 CUIN.

THERMOLITE QUALLO



CZ

Thermolite QUALLO představuje 7-dutinkové vlákno zajišťující vysoký teplotní komfort a měkkost. Dlouhodobě si uchovává izolační schopnost i ve vlhkém prostředí. Schne třikrát rychleji než peří, je antialergenní a lze jej prát v pračce a sušit v sušičce.

EN

Thermolite QUALLO represents a high performance fiber featuring seven air-trapping tunnels that run the length of each fiber to capture and effectively retain body heat. It preserves its insulation properties even in humid weather. It dries three times quicker than feathers, is antiallergic, can be machine-washed and machine-dried.

Definice hodnot komfortu a extrému

CZ

Teplota pro komfort je hodnota teploty, která člověku umožní spát po celou noc v pohodlné poloze. Minimální limit pro komfort definuje minimální teplotu, jež umožní osmihodinový spánek ve schoulené poloze bez probouzení se. Maximální teplota pro komfort označuje nejvyšší teplotu, která uživateli umožňuje spát bez nadměrného pocení. Je definována s otevřenými zipy spacího pytle, odkrytými pažemi a otevřenou kapucí. Extrémní teplota je minimální teplota, při níž spací pytel chrání uživatele před podchlazením. Umožňuje 6 hodin přerušovaného spánku, aniž by vnitřní teplota poklesla na nebezpečnou mez. Při výběru spacího pytle doporučujeme brát zřetel na teploty komfortu v závislosti na fyziologických faktorech popsaných viz výše. Pocity tepla a zimy jsou důsledkem skutečnosti, že lidské tělo vytváří větší či menší množství tepla vzhledem k teplu, které ztrácí kontaktem s okolním prostředím.

Basic Definition of Comfort and Extreme Values

EN

Comfort Temperature is the range of temperatures at which the user gets full nights sleep. Usually this is defined as an upper and lower limit. The Lower Limit of Comfort is usually defined as the lowest temperature at which a person has eight hours of sleep without waking. The Upper Limit of Comfort is the highest temperature that you can sleep without sweating profusely. Usually this is defined with the ventilation zippers open, arms outside the bag and the hood open. Extreme Temperature is the lowest temperature at which the sleeping bag protects the user from hypothermia. This is subject to a variety of conditions but is usually defined as six hours of uncomfortable sleep without diminishing the body core temperature to a dangerous level.

KOMPRESNÍ POPRUHY
COMPRESSION STRAPS

CZECH

1. **VNITŘNÍ ZATEPLOVACÍ LÍMEC**
   Odděluje místo, kde může docházet k cirkulaci vzduchu v prostoru u hlavy a místo, kde je potřeba zamezit úniku tepla ze spacího pytle.
2. **SPECIÁLNÍ ZIPY**
   Umožňují spací pytel rozepnout z obou stran a regulovat tak teplotu uvnitř. Jsou oděru vzdorné a odolné proti unikání vzduchu.
3. **OCHRANNÁ PŘEZKA**
   Na suchý zip zajišťuje zip proti rozepnutí.
4. **ZATEPLOVACÍ LÉGA**
   Zabraňuje úniku tepla zipem, stejně jako celý spací pytel, je i on bez studených švů: našitá stuha proti zadrhávání jezdce zipu.
5. **TERMOREFLEXNÍ VRSTVA**
   Technologie, která dokáže lépe regulovat a udržovat teplotu ve spacím pytli. Jedná se o jemnou a prodyšnou netkanou folii s nánosem aluminiových bodů, které odrážejí teplo zpět k vašemu tělu.
6. **KOMPRESNÍ POPRUHY**
   Na obalu umožňují stlačit jeho objem až o 40 %.

ENGLISH

1. **INTERNAL HEATING COLLAR**
   It separates the place where circulation of air can occur in the head area and the place where it is necessary to prevent in escape of heat from the sleeping bag.
2. **SPECIAL ZIPPERS**
   They allow unzipping the sleeping bag from both sides and thus controlling the interior temperature. They are abrasion resistant and air impermeable.
3. **PROTECTIVE BUCKLE**
   It secures the zip fastener against unzipping Velcro system.
4. **THERMAL INSULATING BAND**
   It prevents in heat escaping through the zip fastener: both the zip fastener and the complete sleeping bag are free of cold seams: stitched on ribbon against zip fastener slider faltering.
5. **THERMOREFLECT LAYER**
   Technology that can better regulate and maintain the temperature inside your sleeping bag. It is a soft, nonwoven and permeable foil coated with aluminum points that reflect heat back to your body.
6. **COMPRESSION STRAPS**
   They are positioned on the packing and allow its volume compressing by up to 40 %.

SLEEPING BAGS

EN 13537 Certificate

Certifikované teplotní určení dle teplotní normy EN 13537

CZ - Spací pytle TRIMM mají certifikované teplotní určení stanoveno na základě testů v akreditované zkušební laboratoří dle nové jednotné Evropské normy EN 13537.

V této Evropské normě jsou spacáky považovány za suché. Vlhkost může zásadně zhoršit tepelné výkonnostní parametry. U mokrého materiálu jsou tepelné ztráty až 24 krát větší než u suchého. Izolační materiál může absorbovat vlhkost jednak zevnitř pocením a dýcháním a jednak p' sobením vzdu#né vlhkosti zvenku.

Certified temperature determination according to the European standard EN 13537

EN - The certified temperature determination of TRIMM sleeping bags was stated under the authority of accredited testing laboratory which tested the sleeping bags according to the new European standard EN 13537.

This European standard considers the sleeping bags dry. Humidity can deteriorate the thermal performance characteristics essentially. The wet material shows up to 24 times higher thermal losses comparing to the dry material. Insulating material can absorb the humidity both from the inside (breathing, sweating) and the outside (effects of air humidity)

EXTREME

T_{ext} – Extrémní teplota – spodní extrémní teplota kde je nebezpečí poškození zdraví podchlazením (vztahuje se na normální ženu a na normální podmínky použití).

T_{ext} – Extreme temperature – the minimum temperature at which a standard woman can remain for six hours without risk of death from hypothermia.

LIMIT

T_{lim} – Limitní teplota – spodní hranice při které uživatel spacího pytle ve skrčené poloze těla je celkově v tepelné rovnováze a právě nepociťuje chlad (vztahuje se na normálního muže a na normální podmínky použití).

T_{lim} – Lower limit temperature – the temperature at which a standard man can sleep for eight hours in a curled position without waking.

COMFORT

T_{comf} – Komfortní teplota – spodní hranice rozsahu komfortu, při které uživatel spacího pytle v uvolněné poloze těla, např.v poloze na zádech je celkově v tepelné rovnováze a nepociťuje chlad (vztahuje se na normální ženu a na normální podmínky použití).

T_{comf} – Comfort temperature – the temperature at which a standard woman can expect to sleep comfortably in a relaxed position.

MAX

T_{max} – Maximální teplota – horní hranice rozsahu komfortu; teplota, při které se částečně nepřikrytý uživatel spacího pytle (normální muž) příliš nepotí (nemusí být uvedena).

T_{max} – Upper limit temperature – the temperature at which a standard man can sleep without excessive perspiration. It is established with the hood and zippers open and with the arms outside of the bag (need not to be given).

CZ: Veškeré vlastnosti a rozměry produktů, včetně hmotnosti spacích pytlů mohou být ve skutečnosti poněkud odlišné od údajů uvedených v katalogu, jiných tištěných materiálech či na webu. Tyto rozdíly jsou způsobeny možnými drobnými změnami v designu, výrobním procesu a/nebo přirozenou odchylkou ve vlastnostech použitých materiálů. Také barvy produktů mají své přirozené odchylky a mohou se tedy lehce lišit od barev vyobrazených na webu či v tištěných materiálech.

EN: All products features and measurement values, including the sleeping bag, may vary somewhat from what is shown in our catalog, other printed items and our website. Such differences can occur because of alterations in the design and production process and/or natural variations in the materials. Fabric dyes have natural variations, so the actual tent color may look slightly different from what is pictured here or on our website.

SELFINFLATING MATTRESS DETAIL

KATEGORIE A KONCEPCE:

Izolační podložka je důležitá součást outdoorového vybavení. Ani kvalitní spacák Vám nezaručí 100 % funkčnost ve všech případech použití, pokud nepoužijete kvalitní izolační podložku především v!extrémnějších podmínkách, jako je spaní na sněhu apod. Spodní vrstva vzduchu u spacáku je stlačená vahou ležící osoby a dochází tak k porušení tepelné izolace, která je hlavní funkcí spacího pytle. Proto je nutné kvalitní karimatkou zamezit přímému styku spacáku se zemí. Další neméně důležitou funkcí je komfort při spaní, kde karimatka dopřeje více pohodlí tím, že vyrovnává povrch pod karimatkou a tělem a spánek neznepříjemňují třeba kameny, tvrdá tráva apod. Obecně můžeme říci, že čím vetší tloušť-ku karimatka má, tím lépe izoluje, má lepší tepelný odpor a je pohodlnější. To vše však na úkor celkové váhy. Proto je dobře zvážit při výběru izolační podložky, kdy a za jakých podmínek ji budete používat - zda celoročně či pouze na letní kempování nebo naopak na expedice do sněhu, pak máte o několik gramů zátěže méně.

Konstrukce samonafukovacích karimatek v sobě pojí výhody pěnových podložek a nafukovacích matrací. Od sebe se liší tvarem, použitým svrchním materiálem, typem a konstrukcí pěny a typem ventilu. Rozdílná konstrukce a tloušťka pěny předurčuje každému modelu samonafukovačky jiné izolační a hmotnostní parametry.

CATEGORIES AND CONCEPTS:

The insulating pad is an important part of outdoor equipment. Not even a high-quality sleeping bag can guarantee the 100% functionality and suitability for all applications, unless you use a high-quality insulating pad, especially in extreme conditions such as sleeping on snow, etc. The bottom air layer is compressed by the weight of the sleeping person breaking the thermal insulation, which is the main function of any sleeping bag. It is therefore necessary to use a high-quality sleeping mat underneath your sleeping bag to avoid direct contact with ground. Another important feature is the increased sleep comfort afforded by the mat as it smoothes out the underlying surface and reduces discomfort from rocks, tough grass, etc. while sleeping. Generally speaking, the thicker the mat is, the better the insulation and thermal resistance, which makes your sleep more comfortable. However, this is achieved at the expense of the overall weight. It is wise to consider when and under what conditions you will be using your mats, whether year-round or just for a summer camp or during a tough winter expedition, in order to ensure that you are not carrying any unnecessary weight.

The self-inflating mat structure combines the advantage of foam pads and inflatable mattresses. They vary in shape and upper material used, in the type and structure of implemented foam and in the valve type. The different structure and thickness of the foam gives each self-inflating model different insulation properties and weight parameters.

1. **Plná pěna: Konstrukce karimatky z plné pěny je nejjednodušší a zároveň nejúčinnější. Pěna bez dodatečné perforace je pohodlná, ale má vyšší hmotnost. Často používaná do komfortních karimatek pro celoroční použití.**
2. **Pěna s vertikálními dutinami: Vertikální dutiny rovnoměrně rozmístěné v pěně dávají karimatce nižší hmotnost a menší objem při zabalení. Karimatka je tak velice rychle a dobře sbalitelná.**
3. **Pěna s horizontálními dutinami: Horizontální dutiny v pěně udržují dobrý poměr mezi nízkou hmotností a výbornými izolačními vlastnostmi. Umožňují snadnější sbalitelnost při celkově nižším objemu.**
4. **Pěna s horizontálními a vertikálními dutinami: Touto kombinací horizontálních a vertikálních dutin je docíleno největšího odlehčení, ale na úkor izolačních vlastností. Proto je tato konstrukce používaná jenom pro oblasti, které nejsou zatěžovány plnou vahou postavy, např. v oblasti nohou.**
5. **Vzduchová nafukovací komora**
6. **Vzduchová nafukovací komora s termoizolací. Uvnitř každé trubice je vrstva rouna z dutých vláken, která zabraňuje úniku tepla.**

1. Full foam: The full foam mat is the easiest and also the most effective. Foam without additional perforation is comfortable, but tends to be heavier. Often used for comfortable mats for year-round use.
2. Foam with vertical cavities: Vertical cavities are uniformly distributed in the foam, which makes the mat lighter and a smaller when packaged. The mat may be packed very quickly and efficiently.
3. Foam with horizontal cavities: Horizontal cavities in the foam maintain a good balance between low weight and excellent insulating properties. They allow for easier packing while offering lower overall volume.
4. Foam with horizontal and vertical cavities: This combination of horizontal and vertical cavities offers the lowest weight, but at the expense of the insulating properties. Therefore, this structure is only used for areas that do not support the full weight of a person, such as in the leg area.
5. Inflatable air chamber
6. Inflatable air chamber with thermal insulation. Each chamber includes the layer of synthetic fiber which prevents from the heat outflow.

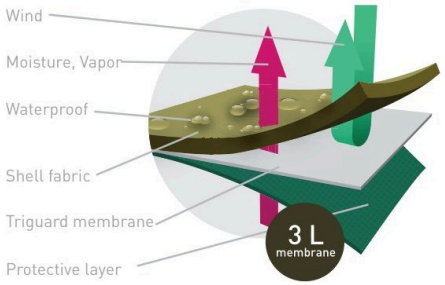
MATERIALS

TRIGUARD 3 L MEMBRANE EXTREME

Triguard 3 L Membrane Extreme označuje technologii založenou na vytvoření materiálu o 3 vrstvách, který se vyznačuje výbornými vlastnostmi. Membrána je laminovaná přímo na svrchní látku a následně je zespodu opatřena krycí textilní vrstvou, která ji chrání proti otěru a poškození. Výsledný materiál se tedy skládá z 3 vrstev: svrchní látky, membrány a krycí textilní vrstvy. Díky této technologii zajišťují výrobky TRIGUARD 3 L MEMBRANE EXTREME spolehlivou nepromokavost a výbornou prostupnost tělesných vodních par. Tvoří dokonalou ochranu proti nepřízni počasí a současně udržuje stálé mikroklima na povrchu těla v klidu i při intenzivní fyzické zátěži. Materiál je určen pro oděvy do extrémních podmínek. /Odolnost proti tlaku: 20 000mm H2O, Paropropustnost: 20 000g H2O/m2 za 24 hod.

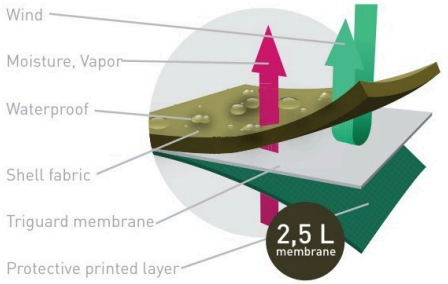
Triguard 3 L Membrane Extreme is a technology based on the creation of a triple-layer material that stands out for its excellent properties. The membrane is laminated directly onto the surface of the fabric, and is then outfitted on the underside with a textile layer that protects it from abrasion and damage. The resulting material therefore comprises of 3 layers: an outer fabric, a membrane, and a protective textile layer. This technology guarantees TRIGUARD 3 L MEMBRANE EXTREME products reliable water-repellent properties and excellent body vapour permeability. It creates perfect protection against inclement weather while maintaining a constant micro-climate on the body's surface both at rest and during intensive physical activity. This material is designed for extreme weather apparel. (Pressure resistance: 20 000mm H2O, Vapour permeability: 20 000g H2O/m2 per 24 hrs.)



TRIGUARD 2,5 L MEMBRANE

Triguard 2,5L membrane označuje technologii založenou na vytvoření materiálu o 2,5 vrstvách, který se vyznačuje výbornými vlastnostmi. Membrána je laminovaná přímo na svrchní látku a následně je zespodu potištěná krycí vrstvou, která ji chrání proti otěru a poškození. Výsledný materiál se tedy skládá z 2,5 vrstev: svrchní látky, membrány a potisku. Díky této technologii zajišťují výrobky Triguard 2,5L membrane spolehlivou nepromokavost a výbornou prostupnost tělesných vodních par. Jsou příjemně měkké, vysoce prodyšné a vyznačují se vynikající vodonepropustností. Spolehlivě chrání proti větru, trvale odpuzují vodu, jsou lehké a snadno sbalitelné. Svými vlastnostmi jsou předurčeny do každého ročního období pro všechny druhy outdoorových aktivit.

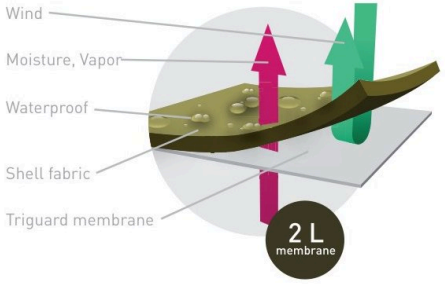
Triguard 2,5L membrane indicates a technology based on creating 2,5 layered material which is characterized by its excellent features. The membrane is laminated straight onto the outer layer and printed with a covering layer from inside. The layer protects the membrane from abrasion and damage. The final material is thus composed of 2,5 layers: outer layer, membrane and printing. Owing to its technology the Triguard 2,5L membrane products ensure great impermeableness. They are soft, highly breathable and water-repellent. They are wind-stopping, extremely light and easily packable. Owing to their features, the Triguard 2,5L membrane products are predestined for all kinds of outdoor activities in any season.



TRIGUARD STRETCH 2L MEMBRANE

Triguard Stretch 2l Membrane označuje technologii založenou na vytvoření materiálu o 2 vrstvách, membrána je laminací spojena s vrchním textilním materiálem. Tvoří dokonalou ochranu proti nepřízni počasí a současně udržuje stálé mikroklima na povrchu těla v klidu i při intenzivní fyzické zátěži. Byla vyvinuta pro aktivní sporty v přírodě a její parametry uspokojí i ty nejnáročnější požadavky na komfort uživatele.

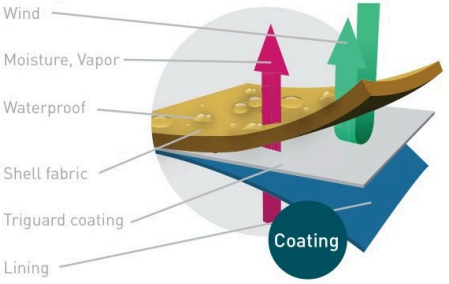
triguard Stretch 2 L Membrane is technology based on the creation of a double-layer material where the membrane is joined via lamination to the outer textile material. It creates perfect protection against inclement weather while maintaining a constant micro-climate on the body's surface both at rest and during intensive physical activity. It was developed for outdoor active sports, and its parameters will satisfy even the most demanding requirements for user comfort.



TRIGUARD COATING

Označení Triguard představuje polyuretanový zátěr aplikovaný na rub materiálu svrchní látky. Tato úprava zvyšuje pevnost a odolnost tkaniny proti oděru a namáhání při užívání. Mikroporézní struktura zátěru nanesená na hustě tkaný materiál zajišťuje odolnost proti větru. Důležitou vlastností zátěru Triguard je nepromokavost, která je docílena velikostí kanálků v zátěru, které nepropustí molekuly vody vnější vlhkosti (sníh, déšť). Molekuly tělesných vodních par jsou menší a tak mohou být odváděny skrze zátěr do vnějšího prostředí. Díky této vlastnosti je vytvořeno příjemné tělesné mikroklima, které zvyšuje komfort při outdoorových aktivitách, pobytu v přírodě i běžném denním nošení.

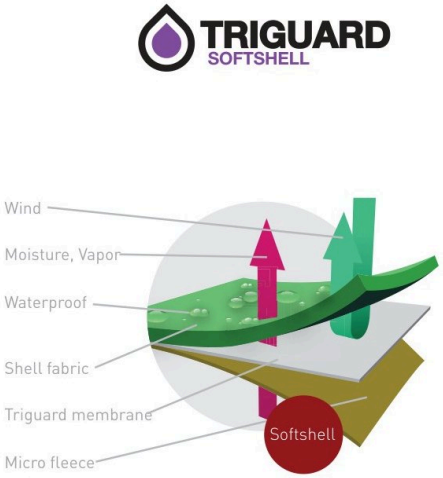
Triguard represents a waterproof breathable coating which is applied to the seam side of outer fabric material. Such application increases final material strength and abrasion resistance. The microporous structure of the coating applied to a densely woven fabric ensures good wind-stopping. The fabric repels external moisture (rain, snow) which is accomplished by means of little channels in the coating. While not letting through water molecules which are big, it allows perspiration vapours to escape since its molecules are very little. Thanks to this feature you can always feel comfortable anywhere you are whether in nature or during your daily routine.



TRIGUARD SOFTSHELL

Soft Shell je souhrnné označení materiálů používaných na oblečení s největším záběrem využití - na rozličné sportovní aktivity při každém počasí. Jde o spojení tradiční Triquard membrány s vnějšími lehkými technickými materiály a vnitřní microfleecovou termovrstvou. Triguard Soft Shell je větruvzdorný materiál, který je charakteristický svou vysokou mírou vodoodpudivosti. Vyniká výbornou mechanickou odolností a je elastický, čímž umožňuje optimální volnost pohybu. Oblečení z tohoto materiálu je lehké a prodyšné. Zajišťuje maximální pohodlí v chladném a větrném počasí. Udržuje teplo dvakrát lépe než klasický fleece a rychle odvádí tělesnou vlhkost.

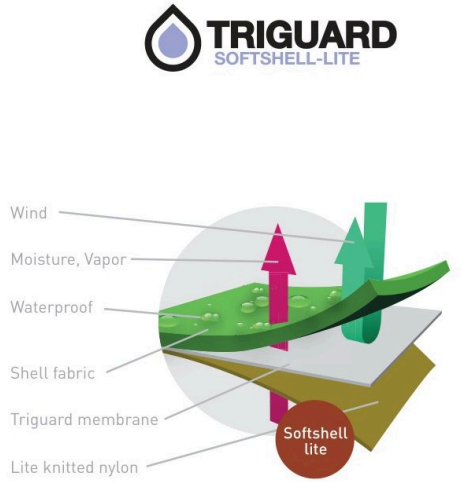
Soft Shell generally denotes fabrics used for clothing for the widest range of use – various sports in all weathers. The Triguard Soft Shell fabric is constituted by a Triguard membrane with outer light technical fabrics and a soft microfleece inside that traps body heat and wicks away moisture. The fabric is thus wind- and waterproof, elastic and abrasion resistant – durable. It provides you with absolute freedom of movement. Triguard Soft Shell clothing is light and breathable. It keeps you comfortable in all weathers, protects from the wind and keeps the body warmth two times better than classical fleece.



TRIGUARD SOFTSHELL LITE

Soft Shell je souhrnné označení materiálů používaných na oblečení s největším záběrem využití - na rozličné sportovní aktivity při každém počasí. Jde o spojení tradiční Triquard membrány s vnějšími lehkými technickými materiály a vnitřní termovrstvou z lehké pleteniny. Triguard Soft Shell je větruvzdorný materiál, který je charakteristický svou vysokou mírou vodoodpudivosti. Vyniká výbornou mechanickou odolností a je elastický, čímž umožňuje optimální volnost pohybu. Oblečení z tohoto materiálu je lehké a prodyšné. Zajišťuje maximální pohodlí v chladném a větrném počasí. Udržuje teplo dvakrát lépe než klasický fleece a rychle odvádí tělesnou vlhkost.

Soft Shell generally denotes fabrics used for clothing for the widest range of use – various sports in all weathers. The Triguard Soft Shell fabric is constituted by a Triguard membrane with outer light technical fabrics and a lite knitted nylon inside that traps body heat and wicks away moisture. The fabric is thus wind- and waterproof, elastic and abrasion resistant – durable. It provides you with absolute freedom of movement. Triguard Soft Shell clothing is light and breathable. It keeps you comfortable in all weathers, protects from the wind and keeps the body warmth two times better than classical fleece.



TRIGUARD WINDSHIELD

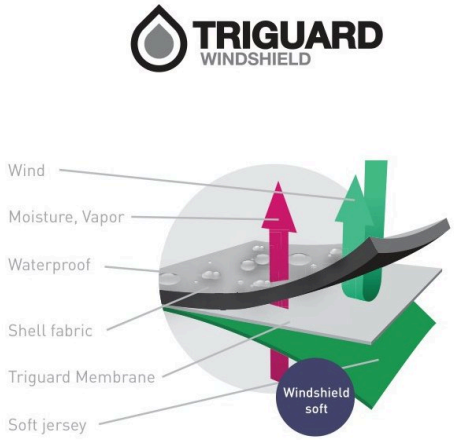
Triquard Wind Shield je lehký membránový materiál, který se skládá ze tří pevně k sobě nalaminovaných vrstev. Vnější vrstva je tvořena lehkou elastickou polyesterovou pleteninou, střední vrstvu tvoří Triquard membrána a spodní vrstvou je lehká mesh podšívka. Celý materiál tak vyniká svými parametry ve smyslu větruodolnosti, nepromokavosti a zároveň vysoké prodyšnosti. Díky těmto parametrům ochrání Vaše tělo před ztrátou tepla působením větru, deště a tím i před následným podchlazením. Zároveň dává membrána volný průchod výparům, kterými si tělo reguluje svoji vnitřní teplotu, takže při tělesné námaze nemůže dojít k přehřátí organismu. Materiály Triquard Wind Shield tudíž udržují pro tělo optimální mikroklima. Oděvy zhotovené z těchto materiálů jsou ideální pro aktivní sport a pohyb. Svým uživatelům poskytují pocit komfortu a lehkosti.

Triquard Wind Shield represents a light membrane fabric which consists of three layers which are firmly laminated on each other. The outer layer is composed of light elastic polyester jersey, the middle layer consists of Triguard membrane and the inner layer is light mesh lining. The fabric is thus special in terms of its wind- and waterproof features and its high breathability. Thanks to such parameters the material prevents you against heat loss because of the wind, rain and thus also against subsequent hypothermia. At the same time the membrane ensures high breathability – it resists heat stress built-up during action sports. Triguard Wind Shield thus provides you with ideal body microclimate. It is ideal for all kinds of sports as outdoor and leisurewear. It provides you with strong feeling of comfort and lightness.

TRIGUARD WINDSHIELD SOFT

Triquard Wind Shield - soft je lehký membránový materiál, který se skládá ze tří pevně k sobě nalaminovaných vrstev. Vnější vrstva je tvořena lehkou elastickou polyesterovou pleteninou, střední vrstvu tvoří Triquard membrána a spodní vrstvou je jemná pletenina. Celý materiál tak vyniká svými parametry ve smyslu větruodolnosti, nepromokavosti a zároveň vysoké prodyšnosti. Díky těmto parametrům ochrání Vaše tělo před ztrátou tepla působením větru, deště a tím i před následným podchlazením. Zároveň dává membrána volný průchod výparům, kterými si tělo reguluje svoji vnitřní teplotu, takže při tělesné námaze nemůže dojít k přehřátí organismu. Materiály Triquard Wind Shield - soft tudíž udržují pro tělo optimální mikroklima. Oděvy zhotovené z těchto materiálů jsou ideální pro aktivní sport a pohyb. Svým uživatelům poskytují pocit komfortu a lehkosti.

Triquard Wind Shield - soft represents a light membrane fabric which consists of three layers which are firmly laminated on each other. The outer layer is composed of light elastic polyester jersey, the middle layer consists of Triguard membrane and the inner layer is soft jersey. The fabric is thus special in terms of its wind- and waterproof features and its high breathability. Thanks to such parameters the material prevents you against heat loss because of the wind, rain and thus also against subsequent hypothermia. At the same time the membrane ensures high breathability – it resists heat stress built-up during action sports. Triguard Wind Shield - soft thus provides you with ideal body microclimate. It is ideal for all kinds of sports as outdoor and leisurewear. It provides you with strong feeling of comfort and lightness.



TRIGUARD BI-STRETCH

Triquard Bi-stretch je elastický, vysoce prodyšný, větruvzdorný a vodoodpudivý materiál, současně je lehký a měkký a poskytuje příjemný pocit při nošení. Je to nová generace technického outdoorového oblečení do každého počasí, vyznačuje se zvýšenou prodyšností, odolností proti oděru a elasticitou. Větruvzdornost je dimenzována na 75%, zbylých 25% může v materiálu cirkulovat, čímž je podporován odvod vlhkosti a také riziko zadržování tepla je výrazně zredukováno. Materiály jsou trvale impregnovány, čímž zajišťují výbornou ochranu proti dešti a větru. Navíc jsou tvořeny 5% spandexu (elastanu), díky kterému je umožněna mechanická elasticita, která je optimální pro volnost pohybu.

Triquard Bi-stretch represents an elastic, highly breathable and water-repellent material which exhibits a very good resistance against wind effects. At the same time, the material is very light and soft and is thus extremely comfortable for the wearer. It is the next generation of technical outwear. It features high breathability, abrasion resistance and elasticity. Windproofness is dimensioned at 75%, remaining 25% enables air circulation which supports moisture permeability and reduces the risk of heat retention. The fabric is finished with a durable water repellent (DWR) to shed rain and snow. The material is composed of Spandex (Elastan) - 5% which ensures excellent mechanical stretch for freedom of movement.

PRIMALOFT® SPORT

Používá patentovanou strukturu ultra jemných mikrovláken s dutými vlákny větších průměrů, čímž je dosaženo velmi specifických výkonových charakteristik. Na povrchu mikrovláken je díky jejich mikroskopickým rozměrům vázáno velké množství molekul vzduchu, které zajišťují jeho tepelně izolační schopnosti i při nižší výšce izolační vrstvy. Díky dutým vláknům větších průměrů je zachován tzv. „loft" i po dlouhodobém používání, stlačování, praní a sušení. Nový PrimaLoft® Sport byl zcela přepracován s použitím nové Convexion Technology, aby získal větší objem a výkon. Bylo dosaženo o 15% objemnější a teplejší struktury izolačního rouna, nadýchanější ultra-jemná vlákna vytvářejí dokonalejší izolaci, teplo bez velké hmotnosti a nesrovnatelné pohodlí. PrimaLoft® Sport se nejvíce ze syntetických materiálů přibližuje peří jak tepelnou izolací, tak lehkostí, měkkostí, stlačitelností a prodyšností. Snadno se udržuje, lze jej klasicky prát, velmi rychle schne. Na rozdíl od peří je Primaloft velmi vhodný i pro alergiky, jeho speciálně ošetřená ultra-jemná vlákna pomáhají tvořit voděodolnou izolační strukturu, uživatel zůstane v suchu a teple i při extrémních podmínkách.

Uses a patented structure of ultra-fine microfibres with larger-dimensioned hollow fibres, which achieves highly specific performance characteristics. The microscopic dimensions of the microfibres help bind a large volume of air, which ensures the thermal insulation properties, even using thinner layers of insulation. The greater dimensions of the fibres preserves their so-called "loft," even after longer periods of use, compression, washing, and drying. New PrimaLoft® Sport was completely reworked with the use of the new Convexion Technology in order to obtain greater volume and performance. A 15% increase in bulk and warmth of the structure of the fleece was achieved, with fluffier ultra-fine fibres creating more perfect insulation, warmth without greater mass, and incomparable comfort. Out of all synthetic materials, PrimaLoft® Sport is the closest thing to true down, both in terms of thermal insulation, as well as in terms of lightness, softness, compressibility, and breathability. It is easy to care for, can be washed normally, and dries very quickly. Unlike down, Primaloft is highly suitable for allergy sufferers, its specially-treated ultra-fine fibres help create a water-resistant insulation structure, and the wearer remains dry and warm, even under extreme conditions.

PRIMALOFT® DOWN BLEND SILVER

Nepřekonatelná kombinace 40% PrimaLoft® ultra jemných vláken a 60% vodu odpuzujícího prachového peří. Teplý stejně jako 650 cuin prachového peří, vodě odolný, prodyšný, sbalitelný, lehký, mimořádně jemný.

The unbeatable combination of 40% PrimaLoft® ultra-fine fibres and 60% water-repellent down. As warm as 650 in3 down, water-resistant, breathable, packable, light, extraordinarily fine.

DuPont™ SORONA®

DuPont TM vlákno Sorona® je vyrobené z obnovitelných organických surovin. Tkanina obsahuje 37 % materiálu obnovitelného rostlinného původu, lze ji tedy považovat za „EKO" materiál šetrný k životnímu prostředí. Izolace z vláken Sorona® je velmi měkká, pevná a rychleschnoucí. Oblečení z tohoto materiálu je příjemné na nošení, elastické, pohodlné a zároveň vysoce odolné vůči mechanickému namáhání. Je ideální pro oblečení na aktivní outdoorové sporty, poskytuje pohodlí i jemnost.

DuPont TM Sorona® fibre is made from renewable organic materials. The fabric contains 37% renewable plant source material, allowing it to be considered an eco-friendly material that is gentle on the environment. Sorona® fibre insulation is extremely soft, strong, and quick-drying. Apparel made from this material is pleasing to wear, elastic, comfortable, yet also highly resistant to mechanical strain. It's perfect for clothing for active outdoor sports, and offers comfort and softness.

TEFLON

Odolná vodoodpudivá ochranná úprava od firmy DuPont. Lze aplikovat na textilní vlákno, nebo na finální textilii. Úprava se provádí za účelem dosažení vysoce vodoodpudivého účinku při zachování původní vzdušnosti, měkkosti a splývavosti upravené látky. Výrobce garantuje, že vodoodpudivý efekt neklesne pod 50% původní úrovně ani po opakovaných pracích cyklech.

This durable, water-repellent protective treatment by DuPont can be applied to textile fibres or to the final fabric. The treatment is performed in order to achieve a high degree of water-resistance while preserving the original breathability, softness, and body-hugging properties of the treated material. The manufacturer guarantees that degree of water-repellent properties will not drop below 50% of the original level, even after repeated washing cycles.

COBRAX™®

RIRI COBRAX TRA-IN

Knoflík Tra-in je kombinací klasického druku a háčku, který sjednocuje estetiku, spolehlivost a použitelnost. Tento nový koncept zapínání, který je kompletně vyroben z nerezové oceli, umožňuje uživateli rozepnutí nebo zapnutí jedním malým pohybem, bez velké námahy a pořád stylově. Revoluční zapínací systém je mimořádně odolný vůči bočním tahům a pnutím.

The Tra-in button is the combination of a classic snap and a hook that unifies aesthetics, reliability and usability. Entirely made of stainless steel, this new concept of button allows the wearer to perform one small gesture to open or fasten garments, without forgetting style. A revolutionary locking system makes it extra resistant to lateral traction.

YKK®

YKK

Zipy renomovaného japonského výrobce, které patří k tomu nejlepšímu, co se v tomto oboru na světě vyrábí. Zipy této značky zaručují kvalitu, dlouhou životnost a spolehlivost. Součásti malých rozměrů ale velkého významu, protože jejich bezproblémová funkčnost je obvykle podmínkou funkce a použitelnosti celého výrobku.

Zips from the renowned Japanese manufacturer that are among the best the field has to offer. This brand of zips guarantees quality, longevity, and reliability. Components of small dimensions but great importance, because their impeccable performance is usually a requirement of the functionality and usability of the entire product.

FOXTERA

♀ WOMEN'S JACKET XS – XXL

OUTER MATERIAL
100 % Nylon , Triguard 2L Membrane , Taped seams , 10 000 /5 000

INNER MATERIAL
100 % PES

A women's outdoor jacket suitable for mountain hikes and other sports activities. The outer fabric is exceptionally abrasion-resistant and, with a 10,000 mm water column and taped seams, practically waterproof. For even more effective ventilation it has zipped underarm vents. The integrated adjustable hood comes in handy when the weather changes suddenly. The practical hem adjustment ensures perfect thermal comfort. This jacket will be a great companion outdoors and in town.

FEATURES

EXPED LADY

♀ WOMEN'S JACKET XS – XXL

OUTER MATERIAL
100 % Nylon , Triguard 2.5L Membrane , Taped seams , 10 000 /5 000

The jacket is made of 2.5-layer fabric, so it is very light and packs easily. The ventilated construction guarantees excellent water resistance and breathability. It reliably protects you from rain, snow and wind and wicks moisture away from the body, so you feel comfortable even in bad weather. 100% waterproof seams add to its water resistance.

FEATURES
- 3D adjustable hood
- Taped seams
- Detachable / stowable hood
